

Stoner**TraSys® 9825**
Mold Release Agent

Leading Filament Winder prefers TraSys® 9825 Water-Based Mold Release.

A filament winder of polyester and fiberglass using another water-based release, had issues with build-up on their mandrels. Plant engineers performed a trial using TraSys® 9825. They saw an increase in the number of parts released between cleaning cycles. TraSys® 9825 improved part appearance and addressed the build-up issue.

This filament winder switched to TraSys® 9825 because:

- Improved efficiency - no build-up on mandrels.
- Improved part appearance.
- Ready-to-use, consistent formula.
- Non Flammable
- No Odor.

This ready-to-use formula means that TraSys® 9825 can be easily used immediately with consistency. No further investment in mixing equipment needed. Saves time and money.
